Texas Oncology is a pioneer in high quality community-based cancer care. Texas Oncology is an independent oncology practice with more than 490 physicians and 210 locations across Texas and southeastern Oklahoma, including 54 comprehensive cancer centers. Our practice includes 309 medical oncologists, 62 radiation oncologists, 28 gynecologic oncologists, 70 surgeons, and 152 advanced practice providers. Texas Oncology’s community-based approach of integrated subspecialty oncology care enables patients to receive leading-edge treatment while living at home and receiving the critical support of family and friends. More than 73,000 new cancer patients were seen at Texas Oncology last year.

treatment under one roof from a knowledgeable and supportive cancer care team, including chemotherapy, patient navigation, social services, financial consultation, radiation, access to clinical trials, X-rays, PET, CT, other diagnostic imaging, lab, and pharmacy services.

Texas Oncology was selected to participate in the Centers for Medicare and Medicaid Services (CMS) Oncology Care Model (OCM), an initiative that transforms how cancer care is delivered. The OCM emphasizes overall experience and outcomes for patients.

Chimeric Antigen Receptor – T cell (CAR-T) therapy, which galvanizes the body’s immune system to fight cancer, is one of the most promising treatment breakthroughs in recent years. Texas Oncology is one of the very few authorized centers in the country to initially provide CAR-T therapy.

Participation in leading-edge clinical trials
Patients who are treated at Texas Oncology have the opportunity to participate in some of the most promising national clinical trials for a broad range of cancers. Texas Oncology is a primary participant in US Oncology Research, which has played a role in more than 90 FDA-approved therapies, about one-third of all cancer therapies approved by the agency to date. At any given time, more than 150 national clinical trials are open throughout the network.

Leading innovation in quality cancer care for Texans
Texas Oncology uses evidence-based best practices to guide patient treatment across the network in a program known as Pathways, in collaboration with the National Cancer Collaborative Network. Texas Oncology physicians use these Pathways and programs to support genetic risk assessment, disease management, cancer survivorship, and advance care planning to improve the quality of the patients’ cancer journey. At our comprehensive cancer centers, our patients access much of their

Texas Center for Proton Therapy in Irving, Texas, provides physicians another advanced radiation treatment option. The center offers pencil-beam scanning and image-guided proton therapy, treating cancer with proton beams as small as two millimeters wide. The technology targets cancer cells with extreme precision, while minimizing damage to healthy tissue and allowing many patients to maintain quality of life during and after treatment.

Integration of health technology platforms to enhance care delivery and population health
Texas Oncology is a leader in innovative healthcare programs to reduce the cost of care and improve population health.

Texas Oncology’s Genetic Risk Evaluation and Testing Program provides an in-depth cancer risk assessment for individuals with a significant personal and/or family history of cancer.

Texas Oncology offers blood and marrow transplant services in Austin and two locations in Dallas.

Texas Oncology connects patients with resources such as nutritional counseling, social services, financial counseling, and support groups.
